Tough enough for conceptual prototyping, design verification and direct digital manufacturing.

Fortus 3D Production Systems produces parts – Real Parts. Parts that can be used for advanced prototyping to test form, fit and function; for manufacturing tools such as jigs, fixtures, molds, and patterns; and end-use parts that can be put into real-working products.

Fortus systems are the most accurate and repeatable systems available from Stratasys: greater repeatability, when producing multiple parts from the same CAD which makes it ideal for multi-part jobs and DDM. The system's extrusion head and gantry maintains the tightest positional accuracy to produce parts with a tighter tolerance +/- .005 inch or +/- .0015 inch per inch.

**Fill out the table below and email ([enquiry@innovan-tech.com](mailto:enquiry@innovan-tech.com)) or fax to us to get a FREE FDM sample part and see for yourself the durability of parts manufactured from a Stratasys FDM System.**
